Tri-Service General Hospital

ABOUT US

Tri-Service General Hospital (TSGH), originally named as the Army 801 General Hospital, was founded in 1946, and reorganized and renamed in July, 1967, after moving from Guangzhou St. to Tingzhou Rd. (a.k.a. the water source camp). To cope with rapidly changing medical settings and strive for the overall development of medical education for the armed forces, the National Defense Medical Center (NDMC) was set up by combining the National Defense Medical College and TSGH in November, 2000 at Neihu, Taipei, where the complex ranged approximately 43 hectares, while outpatient and emergency services are still available in the original Tingzhou Branch. Following the national policy, the Navy hospitals in Penghu(811) and Keelung(812), the Songshan Airforce hospital(807), Beitou hospital(818) and the Taipei Outpatient Center are all affiliated to TSGH, serving military personnel and civilian with top quality medical services. A new page for the medical services provided by the armed forces nationwide was unfolded.

ABOUT US

Organizationally, we are a teaching hospital under the NDMC, in charge of provision of clinical medical services, teaching and research. The medical services are available to the active military personnel, military dependents and the public. As a teaching hospital of medical center grade approved by the Ministry of Health and Welfare, we are always a vital national medical services provider. We are not only a provider of the public medical services and the clinical teaching and internship for the NDMC students in peace time, but also a competent authority in charge of mobilizing support and the medical resources integration and control in wartime.

With Care, Quality, Discipline and Innovation as our core values, constant provision of teaching, studies and services will always be our goals, the Tri-Service General Hospital (TSGH) hopefully is one of the top medical institutions in Taiwan. As it comes to medical services, TSGH will continue cooperate with foreign and domestic medical and research facilities and faculties. With a new look and edgy healthcare dedicated to the armed forces and the public, and as a paradigm of all military hospitals, it is our vision to be the top hospital nationwide, and the healthcare guardian in the community and international medical center worldwide.

MEDICAL SERVICES

The hospital has more than 3,000 employees including medical and administrative personnel serving over 1,800 beds at TSGH Neihu home site.

There are more than 6,000 OPD appointments every day and 100,000 emergency services and 55,000 inpatients on a yearly basis.

To serve the public, we are committed to continuous advanced diagnostic skills and constant investment in cutting edge equipment and instruments and provision of holistic medical care settings, setting up the PET center, the women's healthcare center, the hemophilia prevention and investigation center, the health management center, the MRI center, the SRS therapy center, the center for dental implants, the center for cosmetic surgeries, the cancer center, the medical 3D printing center, the center for precision medicine and genomics, the cell therapy center, etc.

For better medical services and following our tasks, electronic medical records (EMRs), radiation hazard prevention, travel medicine, international healthcare, and molecular diagnostics, precision therapy, AI smart healthcare and cell therapy, and other medical services are provided as well. For acquisition of excellence and provision of fine medical services, the good medical personnel are assessed and assigned to attend the sessions held by the medical centers home and overseas for gaining the latest knowhow and skills.

It is our anticipation to gradually improve the quality of medical services and the operating capacities provided to the army, the dependents and the public with software and hardware updated constantly.

TSGH received the most of the Formosa Fun Coast dust explosion victims with no mortality.

The cell therapy center provides total cancer therapy.

CLINICAL TRAINING

As a medical center and Qualified Teaching Hospital, we not only strive for provision of training for physicians, interns and medical personnel but also thrive in continuous initiation and elaboration of post-graduation (in-service) general medical education and training of clinical medical personnel. In addition to advancement of clinical operating momentum and quality of medical services provided, TSGH is also a provider of internships training sessions with fine clinical curricula available to medical schools nationwide and worldwide. We have trained more than 2,200 medical personnel every year.

With proactive preparation and deliberation of clinical education at TSGH, education sessions are opened for medical personnel, courses for foreign and domestic exchange students are also available. We attempt to reinforce the teaching skills of clinical teachers, refine the quality of instructions and optimize the quality of medical services and medical education consecutively.

We are fully equipped with sound training facilities and platforms, e.g. real facilities including the library, the clinical skill training and testing center, the EBM center, the simulation in healthcare center, the multimedia center, and the platforms set up for digital learning, interactive e-books, clinical training assessment and the real-time teaching feedback system. The national and international training devices are constantly introduced and made available to meet the training needs.

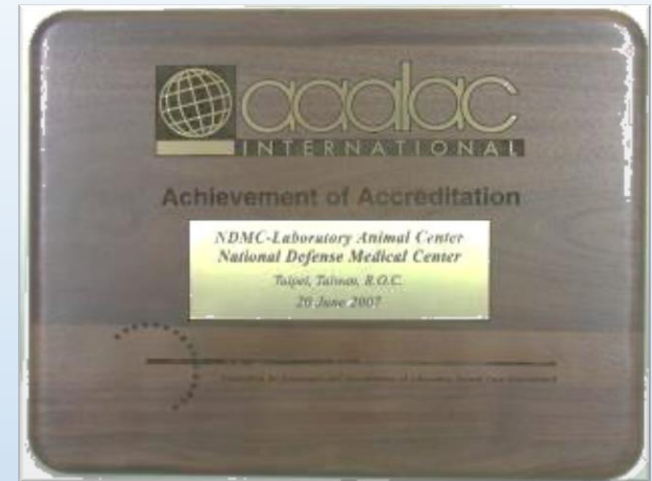

A specific clinical skills and high simulation in healthcare training venue

INNOVATION

To deal with the latest development in medicine and biotechnology, we are in pursuit of excellence and innovation, by setting up a series of investigation programs and rewarding measures to urge the physicians and the medical personnel to spontaneously and aggressively conduct medical studies. There are up to 400 studies done, 600 papers issued on journals and over 20 patents licensed on the annual basis.

We not only own the Expensive Advanced Instruments core laboratory, various investigation laboratories and the center for precision medicine and genomics but also promote the core laboratory team dedicated to functional and exceptional studies.

In addition, we proactively embark on investigations with other faculties. Our faculty partners include Tokyo Medical and Dental University in Japan, and National Taiwan University of Science and Technology, Taipei Medical University and Taipei Veterans General Hospital in Taiwan. With the internal subsidies given and the external resources acquired, medical investigation energy has material gains and growths.

The animal center receives AAALAC.

The center for precision medicine (PM) and genomics was set up

OVERSEAS ACTIVITIES

To fulfill the national policy as a dutiful medical center, we are active on international healthcare support, medical personnel exchanges and clinical training. Thus we have broadened the global visibility to the world and improve the standard in terms of teaching, research and services through international cooperative practice with the globe, expecting to be a medical center at the international class.

We have set up the international healthcare center with annual task. International healthcare support, drills, clinical training for foreign medical personnel and students, various international academic campaigns (symposiums and seminars, workshops and lectures sessions) are prepared and deliberated on schedule. This fully proves proactive engagement and investment in international healthcare and sanitation.
